benhurbenny.byteforge@gmail.com | [linkedin.com/in/benhur167](https://www.linkedin.com/in/benhur167) | github.com/Benhur167 | [Portfolio](#)

OBJECTIVE

Computer Science student skilled in full-stack development, mobile apps, and AI-driven systems. Experienced building scalable, user-focused solutions using MERN, Flutter, Kotlin, and Jetpack Compose. Strong problem-solver focused on impactful, real-world technology.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, Java, Dart, HTML/CSS

Frameworks & Stack: MERN (MongoDB, Express, React, Node.js), Flutter, Spring Boot, Flask, Streamlit, REST APIs, Tailwind CSS, Firebase

DevOps & Tools: Git, GitHub, Docker, Kubernetes, CI/CD, Linux, Android Studio, Maven, Kafka

Databases: MongoDB, H2 SQL, Spring Data JPA

ML & CV: OpenCV, Supervised & Unsupervised Learning, Data Preprocessing, Model Building, Transfer Learning (CNN, MobileNetV2)

Data & Reporting Libraries: Chart.js, jsPDF, SheetJS, Pandas, OpenPyXL, JWT Authentication

EXPERIENCE

Core Embedded Labs — Software Development Intern

May 2026 – Jul 2026

- Contributed to development, testing, and requirement gathering for a SaaS product initiative built with React.js, Next.js, NestJS, and MongoDB.
- Gained hands-on experience across both backend and frontend engineering practices in a live product environment.

JPMorgan Chase & Co. — Software Engineering Job Simulation

May 2026

Virtual Internship via Forage

- Integrated Kafka into a Spring Boot microservice to consume and process high-volume transaction messages, with validation and persistence via Spring Data JPA and H2 SQL.
- Built and tested a REST endpoint (RestTemplate, Spring controllers) for querying user balances, verified with Maven test suites across the ingestion and API layers.

PROJECTS

Carbon Calculator — Streamlit, Flask, MongoDB, JWT, Chart.js

2025

- Core contributor to a GHG Protocol-compliant carbon emissions calculator with multi-site tracking, live dashboards, and PDF/Excel reporting.
- Contributed to development of smaller features and fixes alongside QA, requirements verification, and shaping the product feature roadmap.

Uplift — MERN Stack, REST APIs, Node.js, MongoDB

2024

- Full-stack peer emotional-support platform with JWT auth, role-based access control, and real-time conversation handling with responsive, accessible UI.

Doom Shield — Kotlin, Jetpack Compose, MVVM, Room, Hilt

2025

- Native Android app combating doom-scrolling via Accessibility Service scroll detection, screen-time monitoring, and intervention overlays with local-first data storage.

Gesture Canvas — Python, OpenCV, Deep Learning

2024

- Real-time gesture-controlled AR drawing tool using OpenCV hand-tracking and deep learning gesture classification with optimized low-latency frame pipeline.

PUBLICATIONS

LightLeafNet: Plant Leaf Disease Detection Using a Lightweight CNN

2026

- Comparative study of transfer-learning models (MobileNetV2 vs. ResNet50, DenseNet201, EfficientNet-B0) on the PlantVillage dataset for classifying 38 disease classes across 14 crop species.

ACHIEVEMENTS

- Hackathon Winner (Internal Round) — built and shipped a working product end-to-end within 24 hours (2024)
- Solved 100+ LeetCode problems across Arrays, Linked Lists, Trees, Dynamic Programming, and Graphs (Ongoing)
- 2-Star rated on CodeChef — consistent competitive programming in Data Structures and Algorithms (Ongoing)

CERTIFICATIONS

- Azure AI Fundamentals (AI-900) — Microsoft (2024) | Artificial Intelligence Fundamentals — IBM SkillsBuild (2025)
- Machine Learning for Business Analytics — Wharton, UPenn (2025) | Foundations of Cybersecurity — Google via Coursera (2026)
- Software Engineering Job Simulation — JPMorgan Chase & Co. via Forage (May 2026)
- Internship Certificate — Core Embedded Labs, SaaS Product Development (May–Jul 2026)

EDUCATION

B.Tech in Computer Science & Engineering — Rajiv Gandhi University of Knowledge Technologies, Basar Expected May 2027

CGPA: 8.48 / 10
